Subject Index

Abasic (AP) site, 178
Abasic (apurinic/apyrimidinic) lesions, 132
Accessory protein function, 144–145
ADR1 (alcohol dehydrogenase regulator), 92
Alkylating agents, alkylation lesions of DNA caused by, 18
Alkylations, genotoxic carcinogens and, 343
All-α type of structure, 199
Amino-end rule, effect of *rad6*Δ_{1-9} and, 271
Antisense RNA, *APE*, 306
Apurinic/apyrimidinic (AP) endonuclease
  endonuclease III and, 215
  exonuclease III as, 223
Apurinic/apyrimidinic (AP) lyase activity, endonuclease V and, 182
Apurinic/apyrimidinic (AP) sites
  bypass and base misinsertions at, 351
  nicking at, 222
Apurinic endonuclease (*APE*), 306
Arginine-guanine interactions, 103
Asymmetric dimer, evidence for, 154
ATP binding site of UvrB, 258
ATPase activity, Ruv C and, 164
Autoradiography, ladders of DNA bands quantitated by, 124

B-DNA, e^6G:C base pairs in, 19
Bacteriophage T4, 349
Basal transcription, *Saccharomyces cerevisiae* in, 285
Base damage, damage recognition and, 371
Base dynamics, internal, 303
Base excision repair, 178
Base excision mechanism, pyrimidine lesions and, 72
Benzo[a]pyrene metabolite, molecular dynamics simulation of, 57
Beta, domains of, 155
Beta actin, Z-DNA and, 17
Beta elimination
  apurinic/apyrimidinic sites and, 183
  endonuclease III and, 220
Beta sliding clamp, DNA and, 145
Beta subunit, shorter version of, 155
Beta sheets, exonuclease III and, 230
Biased charge distribution, 201
Bifurcated configuration, 31
Binding, type of, 222
Bis(platinum)-damaged DNA, 244
Branch migration, rotary diffusion and, 156
Breakage-fusion-bridge cycle, 167

C-*jun*, Z-DNA and, 17
Calcium, exonuclease III and, 235
Calorimitry, 48
Carcinogen, benzo[a]pyrene and, 61
Cell cycle checkpoint control, 167
Cell cycle checkpoints, 288
Cell-free system, nucleotide excision repair in, 274
CHO mutant EM9, defect in, 336
Chromosomal rearrangements, gross, 165
Close packing category, α-helices and, 201
Cockayne's syndrome, 330
Complementation of repair synthesis, *in vitro*, 275
Conformational changes, DNA-dependent ATPase activity and, 317
Conformational polymorphism, 31
Corticotropin releasing factor, Z-DNA and, 17
Cross-link, DNA-protein, 244

Crystal structure analysis, NMR analysis combined with, 38
Crystal structure of beta subunit, 146
Crystal structures of complexes of d(CGC[e^{6}G]AATTCGCG), 19
Crystallography
  met repressor and, 109
  structure of exonuclease III determined by, 224
Cyclobutane pyrimidine dimers, 292
Cys_2, His_2 zinc fingers, 93
Cysteine-88, ubiquitin conjugating activity and, 269

D 2 loop helicase activity, 265
d(CGC[e^{6}G]AATTCGCG)-drug complexes, crystal and solution structures of, 18
Damage recognition, UvrABC and, 252
Damage recognition proteins, 236
Damaged DNA-binding (DDB) proteins, 333
Denatured protein, endonuclease V and, 197
2′Deoxy-5-hydroxycytidine (5-OHdC), 361
2′Deoxy-5-hydroxyuridine (5-OHdU), 361
α-Deoxyadenosine (α-dA), novel mutational spectrum induced by, 359
Deoxyinosine, 315
DHR6 protein, 269
5,6-Dihydrothymine, activities of endonuclease III towards, 72
Dihydrouracil (DHU), 299
Distributive search, endonuclease V and, 182
DNA
  bend in, 197
  polymorphic, 1
  undamaged, UvrABC cutting of, 322
DNA adduct, benzo[a]pyrene and, 57
DNA binding motifs, zinc fingers and, 92
DNA binding proteins, helix-turn-helix motif in, 92
DNA conformation, effect of UvrABC nuclease system on, 240
DNA cross-links, genotoxic carcinogens and, 343
DNA damage
  carcinogen-induced, 343
  fine-mapping, 295
  free-radical induced, 71
DNA-dependent protein kinase, 172
DNA helicase, classical, Holliday junction and, 160
DNA helicases, 284
DNA lesions, UvrABC nuclease system acting on, 240
DNA looping, Z-DNA formation and, 12
DNA *N*-glycosylase, endonuclease III and, 215
DNA polymerase, α-deoxyadenosine (α-dA) and, 359
DNA polymerases
  abasic template lesions and, 134
  role of, in an *in vitro* system, 364
DNA repair
  E3-dependent protein degradation by RAD6 in, 271
  eukaryotic damaged DNA-binding proteins and, 333
  mutagenesis in, 296
DNA replication
  O^6-methylguanine and, 342
  recombination, and repair, processivity and, 119
DNA template, RNA primer hydrolyzed to, 154
DNase footprinting, 242
2-D NMR, Cys_2, His_2 zinc finger structures determined from, 93
Double mutants, 273
Dual incisions, UvrABC and, 321

E. *coli*
  base excision repair in, 178
  exonuclease III from, 223
  nucleotide excision repair in, 236, 255
  polymerase III holoenzyme of, 144
Electron density maps, 228
Electrostatic calculations, S-adenosyl methionine activation and, 114
Endonuclease, UvrABC, 252
Endonuclease III, 299

damaged pyrimidines and, 72
structure and function of, 215
Endonuclease V, catalysis and, 181
Energetic recognition, 49
Energetics, 48
ERCC/XP genes, human, 282
Excision repair, T4 endonuclease V and, 198
Excision repair cross-complementing (ERCC) genes, 274
Exocyclic DNA adducts, oxidative DNA damage and, 45
3′Exonuclease, 139
Exonuclease III, structure and function of, 223
Extension, efficiencies of, 138

Factor b complex, NER in *Saccharomyces cervisiae* and, 287
Filter binding assay, MetJ and, 106
Footprinting (*see also* Photofootprinting)
Uracil-DNA glycosylase, 309
UvrB-DNA interactions and, 329
Formamidopyrimidine lesions, recognition and repair of, 208
Formamidopyrimidine *N*-glycosylase, 178, 208
[4Fe-4S] cluster, endonuclease III containing, 215
Free radicals, UV and ionizing radiation generating, 71

G1 chromosome, 167
Gamma complex, tau subunit and, 154
Gel retardation, MetJ and, 108
Gene
denV, 181
metJ, repressor molecule and, 105
rad6-149 mutant, 268
rad6$\Delta_{1\text{-}9}$, 270
Genes, inducible, 345
Genetic recombination, late steps of, 156
Genome instability, tumorigenesis and, 165
N-Glycosylase
activity, endonuclease V and, 182
reaction center, 201
Gp41 helicase, 349
Guanine modification, 8-oxo, 51

Helical kink, 204
Helix-turn-helix (HTH) motif, 218
Hereditary nonpolyposis colon cancer, 165
Heteroduplex DNA, Holliday junction and, 159
HHR6A, B, human, proteins, 269
HIV-1 and AMV (avian myelosblastosis virus) reverse transcriptases, 135
Hoechst 33258, influence of e^6G analyzed using, 19, 24
Holliday junctions, processing of, by RuvABC, 156
Homologous pairing protein, 166
Homologous recombination, role of Z-DNA in, 15
Hydrogen binding, stacking and, 142
Hydrophobic water, 104

Imino intermediate, endonuclease V and, 188
In vitro model system, role of DNA polymerases in, 364
Incision, efficient, 243
Intragenomic heterogeneity, transcriptional modulation and, 257
Iron-sulfur protein, 215

Kinetic influences, thermodynamic differences and, 55

Lesion recognition, 48
Lesions
bulky, genotoxic carcinogens and, 343
oxidative DNA, 346
Ligase, nonhomologous recombination, 166
Legation-mediated polymerase chain reaction (LMPCR), 324

Magnesium, exonuclease III requiring, 233
Main chain folding, unique, 199
Mammalian $E2_{14K}$, 270
Met operators, 105–106
Methanobacterium thermoformicicum, potential DNA repair gene from, 218
Minor groove binding drugs, influence of e^6G analyzed using, 19
Mismatch, 8-oxoguanine and, 213
Mismatch binding, 357
Mismatch-induced destabilization, undamaged base and, 55
Mobile segment, T4 endonuclease V containing, 205
Mobility shift assays, 242
Model of complex, 206
Molecular dynamics, benzo[a]pyrene metabolite and, 57
Molecular dynamics simulation, structure-function studies using, 71
Molecular recognition, 48
Multiple isomorphous replacement (MIR), exonuclease III and, 224
Mutagenesis
  α-deoxyadenosine (α-dA) and, 359
  abasic template lesions and, 140
  pyrimidine DNA lesions causing, 71–72
  site-directed, 201
Mutagenic bypass, DNA repair of *Saccharomyces cerevisiae* and, 267
Mutator phenotype, tumor progression and, 173
MutY protein, endonuclease III and, 218

N-terminal mutants, endonuclease V and, 196
Negative supercoiling, Z-DNA and, 2
Neighboring bases, different results depending on, 44
Netropsin, influence of e^6G analyzed using, 19, 24
NMR, d(CGCGAATTC[m^6G]CG) and, 19
NOESY spectra, phase sensitive, 37
Nonhomologous recombination, 165
Nonspecific binding, S-adenosyl methionine activation and, 117
Nucleosome core particles, 292
Nucleosomes, Z-DNA influencing, 11
Nucleotide, selection of, 143
Nucleotide addition reactions, single-step, 120
Nucleotide excision repair (NER), 236
  cell-free system and, 274
  eukaryotes and, 281
  transcription and, 372
Nucleotide excision repair in *E. coli*, 255

O^6-alkyl-guanine
  crystallizing, opposite T, 44
  nucleophilic sites on DNA bases and, 18
O^6-methylguanine, DNA replication and, 340
Okazaki fragment, 149
omp T protease, 317
Oxidative DNA damage, exocyclic DNA adducts and, 45
8-Oxoguanine lesions, recognition and repair of, 208
Oxygen radicals, active, 71

P53, AT and, 171–172
P53 gene, human, mapping of UV photoproducts along, 324
PCNA, *in vitro* repair and, 276
Photofootprinting, nucleosome unfolding and, 292
P_I, definition of, 124
Polymerase, processivity of, 118
Polymerase III holoenzyme of *E. coli*, β sliding clamp dynamics within, 144
Post-replication repair, *rad6* gene and, 268
Primer extension, reiterative, 295
Processivity
  definitions and measurement of, 124
  endonuclease V and, 181

Proline residues, 231
Protein degradation, RAD6 functioning in, 270
Protein-DNA interactions, 112, 244
Proteolysis, regulation of DNA repair by, 258
Pyrimidine dimer-specific binding, 182
Pyrimidine dimers, T4 endonuclease V and, 181, 198
Pyrimidine glycols, detection of in DNA, 71
Pyrimidine hydrates, UV damage to DNA and, 71

Rad3 protein, damage-specific incision and, 369
RAD genes, *Saccharomyces cerevisiae*, 282
Radl/RadlO complex, 283
Radiation DNA damage, 306
Reductive methylation, endonuclease V and, 184
Repair enzymes, distorted conformation of e^6G:C base pair recognized by, 34
Repair pathway, pyrimidine lesions and, 72
Replication, chromosome, manipulation of β ring during, 149
Replication fork, benzo[a]pyrene and, 59
Repressor molecule, S-adenosyl methionine and, 105
Residence time, 143
Resistance to UV irradiation (Ruv), 164
Reverse wobble configuration, 31
Ring-saturated pyrimidine lesions, biological consequences of, 72
RNA polymerase spacing, 9
RNA primer, transfer experiments with, 154
RNase H activity, exonuclease III and, 232
RP-A(32), 167
RPA, *in vitro* repair and, 276
rph6+, 269
RuvC protein, resolution of Holliday junctions by, 156

S phase, 167
S-adenosyl methionine (SAM), synthesis of, 105
Saccharomyces cerevisiae
  damage-specific recognition and, 369
  multiprotein interactions during NER in, 282
  RAD6 gene and protein of, 267
Salt concentration, binding of polymerase and, 122
Sensing mechanisms, 262
Sequence context, 245
Sequence context, uracil-DNA glycosylase and, 312
Single-strand breaks, 351
Single-stranded DNA
  binding and, 280
  duplex DNA and, 43
SN6999, influence of e^6G analyzed using, 19, 27
SOS-induced error-prone repair in *E. coli*, 133
Spermatogenesis, 273
Spontaneous mutation, 357
Sporulation defect, 270
Sporulation function of *RAD6*, 268
Stability, thermal, 50
Stacking, hydrogen binding influenced by, 142
Stacking interactions, 244
Strand breaks, genotoxic carcinogens and, 343
Structure-function studies, molecular dynamics simulation and, 71
Svn and *anti* conformations, purines in, 1
Syn-anti interconversion, 8-oxoguanine and, 213
Synthesis, processive, 120

T4 DNA replication system, 120
T4 endonuclease V, crystal structure of, 198

Tandem ATP binding sites of UvrA, 260
Targeting, carcinogens and, 343
Tau subunit, gamma complex and, 154
Templates, homopolynucleotide, 126
Tet repressor-operator complex, uracil-DNA glycosylase and, 309
Thymine glycol, endonuclease III and, 72
TOPO-1 mutants, 17
Topology of DNA, 245
TpA cleavage site, DNA structure and base dynamics at, 303
Trans-splicing, Z-DNA and, 11
Transcription
  oxidative DNA lesions and, 346
  Z-DNA and, 5
Transcription factor, sequence-specific DNA recognition by proteins and, 92
Transcription initiation factors, NER in eukaryotes and, 285
Transcriptional elongation, behavior of RNA polymerases during, 351
Transcriptional modulation, intragenomic heterogeneity and, 257
Transcriptionally active DNA, repair of, 330
Tumorigenesis, genome instability and, 165

U937 human leukemic cells, 5
Ubiquitin conjugating (E2) enzyme, ability of RAD6 to act as, 268
Ubiquitin-protein ligase enzyme (E3), 270
Ultraviolet and ionizing radiation, DNA exposed to, 71
Ultraviolet mutagenesis, *rad6*$\Delta_{1\dagger 9}$ and, 270
Ultraviolet sensitivity, RAD6 cells and, 270
Ultraviolet photoproducts, mapping of, 324
Ultraviolet-induced mutations, 365
Uracil-DNA glycosylase (UDG)
  double-stranded DNA and, 312
  tet repressor-operator complex and, 309
Uvr proteins, overall properties of, 253
UvrA, 236, 244
UvrAB complex, 238
UvrABC
  damage recognition by, 252
  DNA repair by, 327
  dual incisions and, 321
UvrB, 244
UvrB mutants, 327
UvrB protein, DNA-dependent ATPase activity by, 317
UvrB-ATPase, moving of, along the DNA, 265
UvrB-DNA interactions, model for, 329
UvrC, 240

Vectorial movement, study of, 252

Walker-type ATP-binding sites, 238
Watson-Crick G:C configuration, normal, 34, 38
Wobble base pair, 31, 56

X-PLOR system of programs, 226
Xeroderma pigmentosum (XP), 274, 286
  eukaryotic damaged DNA-binding proteins and, 333
  group G, 330
XRCC1 protein, CHO mutant EM9 and, 336

Yeast, NER in, 281
Yeast redoxyendonuclease (YRE), 299

Z-DNA binding proteins, 4
Z-DNA crystal structure of
d(CGC[m6G]CG), 19
Z-Z junction, 7
Zinc finger
isolated, 103
sequence-specific DNA recognition
by, 92
Zuoten, 16
